Letter of Recommendation

Dr. Fred Gaskill
Optical Sciences Center
University of Arizona

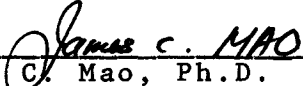

Dear Dr. Gaskill:

Bob Dahlgren has worked in our Optics Laboratories for the last two years. He has basic and applied knowledge of optics. As I know, he has worked with optics for at least five years. His work includes theoretical analysis and experimental measurement with well written technical reports. He has solid training and understanding in various fundamental sciences and engineering. He has the talent to utilize different combinations of electronics, optics, mechanics, computer and software and chemistry to get his job done.

He is particularly creative and innovative. As I know, he has one patent in application. He is easy to work with as a team member. He is always willing to help others to solve their problems too.

Bob has decided to go back to school for more education. He has very high potentials to be a brilliant scientist and has made important contributions to practical and useful applications.

Sincerely,

James C. Mao, Ph.D.
Manager
Advanced Mechanical Technology
